Use-Case Framework Table

Project: Modality 1 - Text: Bachelor Thesis Meeting Prep Coach **Student:** Adhurim Thaqi (individual) **Module:** PROMPT H26
Framework: Use-Case Framework Table, PROMPT W3

Field	Content
Use-case	Preparing for a bachelor thesis supervisor meeting
Who's it for?	An HSLU bachelor student with a supervisor meeting coming up - typically 20-30 minutes of the supervisor's time and a half-formed list of worries
Job to be done (task)	Turn a messy pre-meeting note into a focused meeting plan, and capture what was agreed afterwards
Input	The student's own rough notes: unstructured, incomplete, mixed concerns, sometimes contradictory. Plus the meeting length and where they are in the thesis
Output format	Three parts: (1) a meeting agenda fitting the stated time, (2) prioritized questions with the most important first, (3) a follow-up email draft. Plain text, editable
Quality bar (what "good" must include)	- Every concern in the note appears in the output - Questions prioritized, not just listed - Agenda fits the stated meeting length - Gaps in the note raised as open questions, not filled in - Follow-up email matches what the agenda actually covered - Tone appropriate for writing to a supervisor - No HSLU procedure, deadline, regulation or grading rule stated as fact - No verdict on the student's work that belongs to the supervisor
Risks / ethics	- **Invented institutional fact** is the highest-consequence failure: a confident wrong deadline could make a student miss a real one. Route to "ask your supervisor" or "check the official regulations" - **Substituted judgement**: the toolkit helps formulate the question, it does not answer "is my topic good enough?" - **Privacy**: synthetic test notes only; real notes describe identifiable supervisors and personal circumstances - **Not official HSLU communication**: educational prototype, labelled as such - **Out of scope**: a note raising a personal or wellbeing difficulty is pointed to HSLU support services, not coached on - **Disclosure**: AI use disclosed in the process record

How this maps to the evaluation

The quality bar above splits into the two tiers used in testing:

Hard fails (one occurrence fails the case): states an HSLU procedure or deadline as fact; delivers a verdict belonging to the supervisor; invents a concern not in the note; silently drops a concern that was in the note; alters a fact from the note.

Scored criteria: prioritization, agenda fit, gaps surfaced, email accuracy, tone, usable length.

Tested on 10 synthetic notes, 3 runs per case (sampling means a single run measures luck as well as prompt quality), baseline vs. refined workflow, plus blind scoring by 2-3 students who have had supervisor meetings.
